		Expected outcome	<p>PO-1 Computational Knowledge- Apply knowledge of computing fundamentals, mathematics and domain specific knowledge for modelling, designing and developing the solution from defined problems and requirements. PO-2 Problem Analysis- Solve complex computing problems and provide authenticated solutions, using conclusion fundamental principles of mathematics, computing, and domain specific disciplines by exploring relevant literatures. PO-3 Design / Development of Solutions- Identify, Analyse, Design and Evaluate a computer-based system, components and process to meet the specific needs of applications, as well as the computing requirements considering public health and safety, cultural, societal, and environmental concerns. PO-4 Conduct Investigations of Complex Computing Problems- Investigate research techniques for developing effective solutions by systematic analysis of data for getting valid conclusions. PO-5 Modern Tool Usage- Design, analyse and develop the computing systems using modern tools by considering the limitations. PO-6 Professional Ethics- Adapt to provide ethical solutions, within the boundaries and responsibilities of professional computing practices and cyber regulations. PO-7 Life-long Learning- Understand the need, for and have the preparation to absorb in independent and long-term learning in context to technological updates. PO-8 Project management and finance- Demonstrate knowledge to considerate the computing and management principles and apply them to own establishment, to function effectively as an individual and as a member or leader in diverse teams in multidisciplinary environment. PO-9 Communication Efficacy- Communicate effectively on computing activities with the computing community, and with society at large and present effectively by writing and designing effective reports and design documentation, make effective presentations, and give and understand clear instructions. PO-10 Societal and Environmental Concern- Understand the social, professional, cultural, inequality, diversity and ethical issues involved in the development of software systems. PO-11 Individual and Team Work- Demonstrate as an individual and as a member or as a leader in diverse team and in multidisciplinary environments for effective solutions. PO-12 Innovation and Entrepreneurship- Demonstrate knowledge by applying innovation skills and initiating significant and prosperous opportunities for the progress of individual and society at large.</p>

Outline of the Syllabus	<p>The M.Sc. Mathematics program is designed to provide advanced knowledge in mathematical theories, techniques, and applications. The curriculum typically includes core courses in real analysis, complex analysis, algebra, topology, and differential equations. Electives may cover areas such as numerical analysis, mathematical modeling, statistics, and applied mathematics. The program often involves a blend of coursework and discussions, allowing students to delve into specialized topics. Learners are equipped with critical thinking, problem-solving, and analytical skills applicable in academia, industry, finance, and technology sectors. The program is emphasizing both theoretical understanding and practical application.</p>	Whether SLM approved by Statutory Authority of HEI	Yes		Percentage of SLM developed by In- House Faculty	100

## Learning Management System (LMS)

### Counselling Process

**Mode of Counselling :-** Online

**Brief describe the provision in LMS to be used by HEI :-**

Our in-house developed Learning Management System (LMS) is user-friendly and complies with UGC Regulation 2020. It allows faculty to create and manage courses, assignments, and assessments effortlessly. The LMS supports interactive tools like quizzes, forums, and video conferencing, promoting student engagement. It offers detailed tracking and analytics to monitor student progress and performance. Integrated communication tools facilitate seamless interaction between students and faculty. The system ensures data security and privacy, providing a safe learning environment. Overall, our LMS supports HEIs in delivering an effective and engaging educational experience.

**Briefly write how the Learning Management System (LMS) will ensure the following: (provide a demo link, if available) :-** <https://lms.jnujaipur.ac.in/>

Assessment mechanism	We conduct assessment using online proctored examination mode. The platform that we use allows faculty to create and manage quizzes and tests. These assessments can be scheduled for specific time slots and can include multiple-choice, short answer, or essay questions. Students can submit assignments online through the LMS, where instructors can grade and provide feedback directly, streamlining the assessment process. Discussion forums on the LMS enable students to participate in both synchronous and asynchronous discussions. Additionally, the LMS supports proctored online exams, incorporating extra security measures to ensure integrity.
Identified technological interface and interoperability	The system is designed to work seamlessly with educational content, interactive programming exercises, originality verification, and virtual meeting capabilities. Additionally, it allows for the incorporation of new platforms and technological solutions through APIs, following a comprehensive evaluation process.
Learner's Authentication Requirements	To access the Learning Management System (LMS), individuals are required to create a distinct username and establish a robust password. Upon registration or password modification, a verification process is initiated where a link is dispatched to the user's email for confirmation.
Learner Registration - through a web application	The web application has a registration form designed to collect the information like Name, Contact number, Address, email, educational qualification, ID details etc.. from learners. They have the option to select the desired program. A verification step is incorporated into the registration procedure to safeguard against unauthorized access. Additionally, learners are required to input payment details to finalize their registration. Once registered successfully, learners have the opportunity to build a user profile for further personalization. A confirmation email is dispatched to the learner's email address, extending a warm welcome to the program and further steps for enrolment.
Active Engagement of the Learners along with Analytics for active engagement of learners and Reporting	The platform can host interactive content, including quizzes, polls, and discussions, to engage learners effectively. Analytics track participation and performance in these activities, offering insights into the most effective methods. Incorporating gamification elements, such as badges, leaderboards, and discussion forums, further motivates learners. By measuring participation levels, the quality of discussions, and identifying learners who may need additional support, analytics play a crucial role. Tracking video views, completion rates, and interactions within learning material helps faculty understand learner engagement.
Payment Gateway –using Digital Payment system	Available
Tracking the delivery of a Course or programme	The system maintains a record of student enrollments and their interactions with the Learning Management System (LMS). It observes and records the frequency and duration of user logins, as well as the regularity of their visits. Additionally, the LMS keeps track of the course content and resources accessed by students, along with their level of engagement. It archives all quizzes, assignments, and exam data, evaluates performance scores and the rate of course completion, and logs all communication between instructors and students, such as messages and forum contributions. The platform also oversees the assignment and assessment grading process, ensuring that feedback is provided to students promptly.
Technical Know-how or Skills Requirements	The LMS is designed to be user-friendly that can be accessed by beginners. Clear indications are provided to users for next steps for the registration process, accessing learning material, and navigating to assessments. Users are guided to use discussion forums, chatbots, and messaging features on the LMS. Faculty members are trained and have the ability to create quizzes, assignments, and exams. Faculty members also host virtual meetings, webinars, and collaborative projects, as well as possess skills to generate and interpret reports on learner progress and engagement, and have an awareness of data security.

**Briefly write on ICT facilities available/ to be ready dedicated for the implementation of Online Courses :-**

Provided with bandwidth of 1 Gbps Broadband Line from National Knowledge Network (NKN), the Institute has been connected round the clock Internet facility with high-speed Optical Fiber and Wi-Fi. The network is protected and controlled by Unified Threat Management (UTM) XG next generation firewall. The computer facility has been provided to each School/Department with peripherals and are connected through LAN/Wi-Fi. LCD projectors interfaced with computers have been installed in the Lecture Halls/Class Rooms to undertake Computer-Aided Teaching/Learning as well as for presentations. All the campuses of Jaipur National University are under round the clock CCTV Surveillance System for safety and security. The library and information services activities have been made fully automated. The Institution deploys and upgrades the IT infrastructure and associated facilities whenever required. IT Department is very responsive to comply with any requirements/repairs received from Heads of Departments for implementation. Computers and other hardware are regularly upgraded with modern configuration to upkeep with the necessary academic requirements. Routine maintenance of computers, peripherals, network devices, servers, etc. is carried out by the staff members of the department of IT.
